

ARCHIDATA DOCUMENT MANAGEMENT

The Only Tool to Link Documents to Spaces and Equipment

The Document Management Module allows users to archive and classify files by project in the Plan Room, with a classification tree that can be set up according to any organization's nomenclature.

The module is also part of the Archidata ecosystem, with access to archived documents being possible by navigating through the Building Dashboard where documents are linked at different levels including building, floor, unit, room, workstation or equipment. It allows for deeper level of search to locate technical documents, surface area reports, asset assessments, etc.

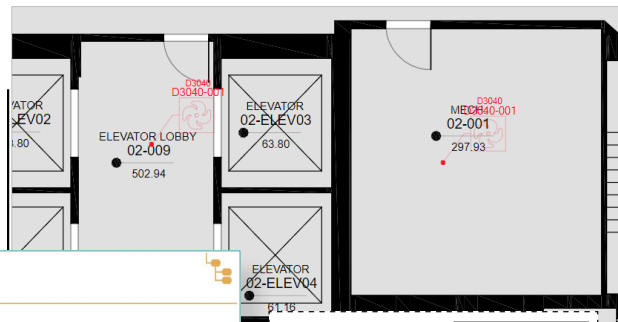

BENEFITS

- Only tool to link documents to specific spaces or geolocated equipment
- Remote access to all up-to-date building documents
- Powerful search engine with keywords and specific filters
- Easy upload and download
- User groups created according to specific projects or types of document
