

Temporary Dashboard to Plan the Future Space Layout in a Floor/Building

The Scenarios Module allows to simulate and configure different floor layout scenarios for different categories of usage (occupancy, premises, etc.) without affecting the existing database.

Proposed scenarios can be viewed directly on a new “fictitious” floor plan, thanks to a colored legend system indicating affected areas.

Users can then present future floor plan layouts on colored drawings to get approval by managers, designers and occupants. Once approved, the scenario floor plan layout and data can be integrated into the existing database.

BENEFITS

- Better planning and visualization of new floor layout
- Time saving in approving new floor plan layout and help with decision making
- Visual tool showing changes based on different types of data (department, program, rooms, etc.)
- Flexibility and freedom to do multiple tests without modifying the existing database
- Clear, quick & easy communication with occupants regarding planned changes and possible impacts
